Datapipe Partners with Verne Global to Deliver Green Cloud from Iceland

October 22nd, 2011

(NetEvents) -- Verne Global, an innovative, UK-based developer of power conscious data centre campuses, announced that Datapipe, a leading provider of managed services and infrastructure for mission critical IT and cloud computing, plans to deliver carbon neutral managed IT solutions, including a green cloud and disaster recovery, upon completion of Verne Global's purpose-built Icelandic data centre facility.

Verne Global's 18-hectare campus in Keflavik, Iceland is 100% carbon neutral, drawing commercial power from Iceland's dual-sourced renewable energy (hydroelectric and geothermal) power grid and utilising Iceland's ambient temperatures to provide free cooling.
