Cox Business Connects with CENX to Expand Ethernet Services

By [Bob Emmerson](#), TMC European Editor

Cox Business has announced the expansion of its Ethernet services offer via its connection with **CENX**, the operator of the world's first carrier Ethernet exchange. The initial connection was established at the Los Angeles exchange.

Cox (**News - Alert**) Business is the fourth largest business Ethernet provider in the U.S. and a pioneer among multiple system cable operators in providing networking services. The new relationship with CENX (**News - Alert**) creates additional options for wholesale and retail customers to connect locations throughout their network footprint.

Because Cox has established dedicated fiber links to CENX, customers can seamlessly link to the Cox network without the cost and delay of establishing a dedicated interconnect. The CENX exchange also provides enhanced service level monitoring and increases performance visibility.

"Ethernet is the technology of choice for business and carrier organizations today," said Jay Clark, director of carrier product and sales operations for Cox. "Our membership in CENX's exchange reduces the costs and complexity associated with dedicated interconnects and extends the reach of our vast metro networks to more customers."
