We need more students that excel in science, math, technology and engineering to become a contributor to the global technology marketplace. High tech companies have vacancies due to a lack of qualified candidates, and the demand for scientists and mathematicians is projected to grow dramatically. Over 50% of US 8th graders receive instruction from a science and math teacher without a relevant degree or real world experience to inspire their students.

The Computer History Museum, as a 2012 STEM Innovation Award Winner, and HP Catalyst Initiative participant, is proud to raise money for Science, Technology, Engineering and Math (STEM) education by hosting the Ethernet Celebrity Auction.
