Multicloud

(No Time to Repeat Rest of Panel Title)

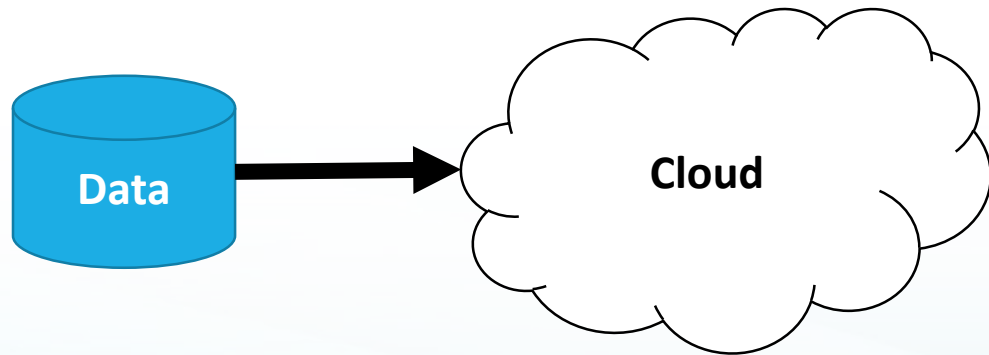

Peter Burris, Analyst

Multicloud

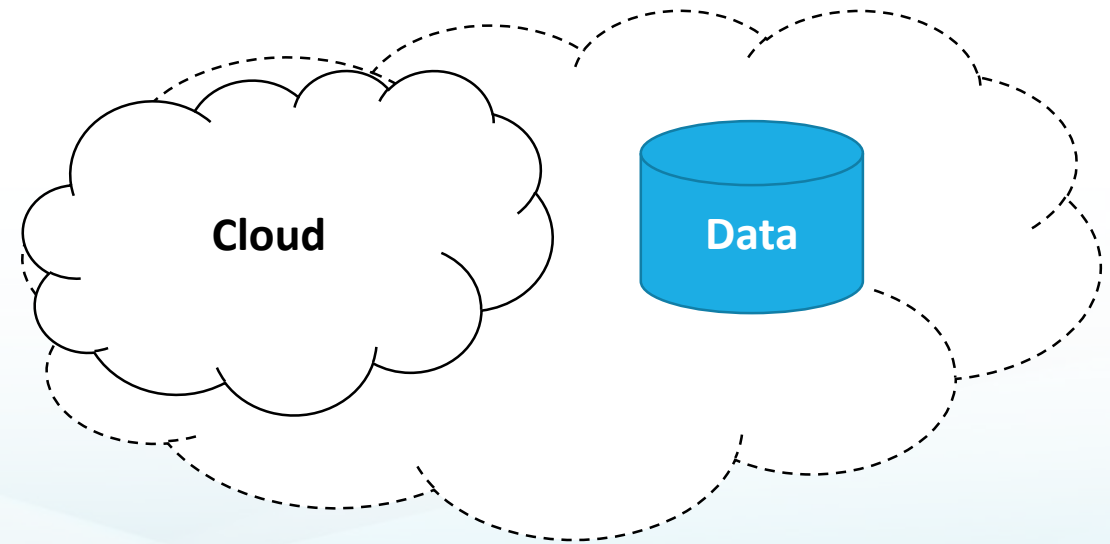

1. The difference between business and digital business is the role of data.
 - Putting data to work where business is conducted.
2. All business, all sectors experiencing a shift from a “product” to a “services” engagement model.
 - “Cloud” represents this shift in the technology industry.
3. Cloud also is a milestone in long-term tech industry trends.
 - An architecture for simpler, powerful distributed computing, not centralizing computing on a massive scale.

Data-First Workloads Drive Technology Choices

Public Cloud Option:
Data Moves To Cloud

Core and Edge Cloud Option:
Cloud Moves To Data

Four Questions to Think About (Today)

- What are the impacts of data emerging as a (the?) primary asset in IT?
- What is the relationship between multcloud and networking?
- We keep talking about “the data explosion,” but what about the coming “software explosion?”
